Minimal Down Time…
Maximum Results!

The Vampire FaceLift® is the latest advance in minimally-invasive cosmetic procedures.

The Vampire Facelift® was developed by Dr. Charles Runels, M.D. over several years. Dr. Birchall was trained by Dr. Runels himself in the art and technique of this procedure.

The specific results you can acheive are best explained in a consultation with Dr. Birchall at The Fountain™ Age Management and Aesthetics.

The patient who will benefit most is: athletic, active, of healthy weight and has had volume loss in the face. The procedure can be performed on both men and women.

This procedure is not intended to fix a sagging neck or double chin. It does not work on excessive eyelid skin and is not meant to replace an eyelid lift.

The procedure ***can*** immediately restore volume to sagging cheeks and enhance the overall appearance of the skin after several months.

How it Works

The Theory and Practice of The Vampire FaceLift®

Theory Explained

The theory behind The Vampire Facelift® is simple. Perhaps you recall as a child, falling and scraping your knee or elbow. The area of damaged skin was initially surrounded by a yellow, sticky substance.

This yellow substance was **P**latelet-**R**ich **P**lasma, or **PRP**. Medical science has shown this miraculous part of the blood draws stem cells and other healing agents to a wound, like a magnet pulls metal objects towards itself. **PRP** starts the healing and regenerative processes.

How It Is Done

As just explained, **PRP** is a part of your own blood. Everyone has it. A small quantity of blood is withdrawn from a vein and collected in a specially prepared tube. This collection tube has a substance that absorbs all of the blood products, *except* **PRP.**

To further increase the amount of **PRP** available, the collection tube is spun in a centrifuge to push the red cells into the absorption matrix at the bottom of the collection tube.

Next, the **PRP** is "activated" so that it will form a gel in approximately ten minutes. This activation and gel formation is what holds the **PRP** in place in the cheeks and face while stem cells and other regenerating components of blood are called into the area.

To further increase the volume-enhancing effects of the procedure, Restylane® facial "filler" is also injected into the area. Restylane is a product which contains the same substance that gives our skin volume and beauty. The effect is additive, the results are amazing!

Thus, nothing but your own blood and Restlyane® are used.

The Results

There are two phases of results. The immediate results are increased volume and enhancement of the natural contours of the face. The second result is regeneration of the skin as stem cells are drawn into the area injected with **PRP.**

.

Best Yet – No Down Time!

The Vampire Facelift® is almost painless and takes just over an hour. Afterwards, you are ready for an evening dinner party or other social engagement without having to wait weeks to look your best. The immediate results and long-term improvement start right away!
