Facts and Myths About Penile Enhancement

The Fountain™ – Age Management and Aesthetics is proud to offer a procedure that can enhance and rejuvenate male sexual performance.

If you have problems with performance and have been dissatisfied with erectile dysfunction medications and their numerous side effects, please consider this:

- This procedure requires no surgery or implants
- No medication is required for results
- Results in many men are immediate
- May be repeated for added benefit
- There is no “down time” – you can return to work immediately
- Safe and effective
- Pain-free
- Can be done on your lunch break or after work!

This will do what creams and pills won’t… rejuvenate!

Male Enhancement That Works: The Priapus® Shot

Regain the confidence and performance of years ago. The Priapus® Shot, a procedure for male enhancement, is now available at The Fountain™- Age Management and Aesthetics.

The Procedure Uses Your Body's Own Healing Process to Rejuvenate

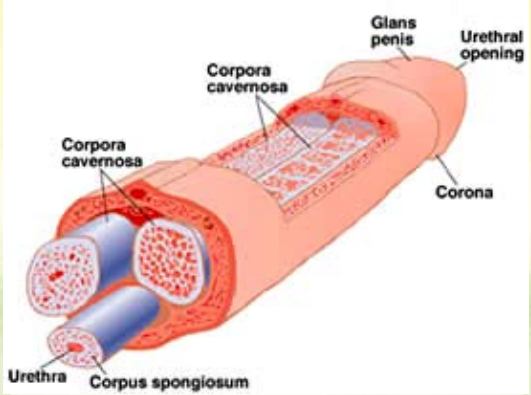

As a child, you probably noticed a thick yellow substance that formed on and around a scrape or abrasion on the knee or arm. That substance was platelet-rich plasma (**PRP). PRP** is what the body uses to regenerate and repair injuries. PRP extracted from blood can be injected into areas of the body that are injured or in need of rejuvenation.

PRP Used in the Vampire FaceLift®

Injection of **PRP** in the face is the basis of the Vampire FaceLift®. Charles Runels, M.D., who discovered this procedure to rejuvenate facial skin, also pioneered The Priapus Shot®.

How Is The Procedure Done?

A sample of your blood is collected in a vial. The vial is then "spun" in a centrifuge to separate the red cells from the **PRP**. The resulting **PRP** is "activated" to stimulate the platelets and form a fibrin matrix so that it is not "washed away" by the body and will stay where it is needed.

An anesthetic cream is applied to the penis to make it completely numb. The activated **PRP** is injected into the "*Corpus Cavernosa"* shown in the diagram above using a small needle. The procedure is painless and takes 20 minutes.

Your Results

Enhanced Performance

The **PRP** enhances blood flow to the *corpus cavernosa*, the structure in the penis that causes an erection. Increased blood flow results in a firmer, harder erection. **PRP** injected into the *Glans Penis* increases sensitivity.

The use of a penis pump is recommended just after the procedure to distribute the **PRP** throughout the tissues for best effects.

Continued use of the penis pump after the procedure can increase the length and girth of the penis.

The Priapus Shot® can be repeated for increased results.

Eliminate the need for prescriptions. Results start the day of the procedure!
